MONTHLY SPCC INSPECTION CHECKLIST

Inspection Date: 4-20-07

Inspection Time: 9:10

am/pm

INSPECTION FOR SPCC/BMP				
Source to Process Areas Process Equipment				
Yes	No	Inspection Section	Comments	Corrective Action
	<input checked="" type="checkbox"/>	Any visible oil residue or leakage from the process equipment?		
<input checked="" type="checkbox"/>		All transfer pipes properly labeled?		
	<input checked="" type="checkbox"/>	Any visible spills, residue, or leakage in containment areas?		
	<input checked="" type="checkbox"/>	Is there any leakage around fittings?		
	<input checked="" type="checkbox"/>	Is there any leakage around piping?		
OTHER OBSERVATIONS:				
Inspected by: <u>Bill Osborn</u> Printed Name Signature: <u>Bill Osborn</u>				

On a monthly basis, the Plant Manager or his appropriate designee shall visually inspect the potential pollution sources, potential pollution areas, secondary containment, etc., for any changes and problems since the previous inspection. The inspection should include, at a minimum, observations to identify any evidence of the following:

1. Signs of leakage or deterioration (rust, cracks, dents, bulges, etc);
2. Improper positioning of drums;
3. Oil spills in truck unloading areas;
4. Oil spills in equipment areas;
5. Improper housekeeping activities.

All problems and questionable conditions shall be noted on the inspection form and immediately reported to the Environmental Manager. All necessary corrective action shall be undertaken in a timely manner and shall be recorded. All inspection record shall be maintained for a minimum of three years.
